## Customer Reviews

I am using MongoDB 3 (3.0.8 to be specific) as this book supposed to be using. Many of the examples do not work. I often google around and find equivalent command or syntactic errors, fix them, and make them work. Eventually I came to page 182, and I quote:"Go ahead and mongoimport the MongoDB data from the twitter.tgz into your database:\$ mongoimport test.json -d test -c texttest" What the heck?? Where did that come from in a sudden? What is twitter.tgz, where is test.json?? Have you ever said a single sentence about mongoimport so far? Once you finish writing a book, please, please proof-read not just the syntax but also the semantics..
