Chapter 1 Materials and Equipment The book begins from the assumption that you own little to know tools and then goes on to cover the basic tools need for framing. This includes sharp, modern, color photographs with detailed descriptions of each item and how it is used. The author also does a nice job at providing more than one tool example to accomplish the same job, such as the different type of mat cutters. He explains the differences between the simple inexpensive models to the costly advanced versions and how you would need to implement them. This chapter also covers the five basic parts of a frame (backing board, picture, mat, glass, and frame) and the primary categories of moldings. One glaring omission: there is only one brief mention of power miter saws.

Chapter 2 Making a Simple Frame The chapter begins with cutting the mat, which after reading through the book, you'll discover is one of the most challenging tasks in framing a picture. The author covers several different methods in cutting a frame from a standard knife to an expensive professional cutting system. Next is cutting and joining the frame, and looking at this book from a woodworker's point of view, this was both inspiring and frustrating. It was an inspiration in that the displayed techniques sent my creative thought process into motion and gave me direction as to

what type of frame I would like to design and make. It was frustrating seeing how the cutting and joining process was oversimplified. The uninitiated in the skill of cutting and joining small pieces, especially mitered pieces, will be very disappointed at how the process has a higher than normal learning curve. And God help you if you skimp out on any of tools presented and opt for the wooden miter box to produce a tight fitting 45° angle.
