Somewhere in the text of this book Dean Miles suggests that if you've been hired as the location sound man for a Hollywood movie, you probably don't need this book, suggesting most of the material is designed for video. A bit less explicitly stated is that this book is aimed at those productions with a large enough crew to have a separate sound man. The book is technical in

nature, although offering suggestions on how to get along with the director and camera man. After suggestions on choosing and preparing the location, the author tells how to use a field mixer, shotgun microphones (including booming) lavalier microphones, wireless systems, and video and DSLR cameras. Miles explains what settings and cabling are best for almost any combination of these items. There is a section on using a field recorder, illustrated with a Zoom H4n (although only as a recorder, and not for its microphones). There are also chapters dealing with the special problems of interviews, and with add-on equipment. The book is dedicated primarily to recording dialog, without covering either sound design or sound editing. Except for the section on hooking up one or more microphones directly to the camera there is no emphasis on the lone wolf videographer-sound recorder. However, given a careful reading of the book, and the manual that comes with equipment, most of the information is transferable to the solitary shooter. Throughout the book, there are instructions to watch classes with titles similar to those contained in the book. These are part of a \$199 course offered on-line by the author, rather than a free website provided by the publisher. I did not examine these classes, especially since the author's instruction in the book seemed clear and comprehensive enough for my purposes.
