This is my third reading on the topic of WebRTC. Being a person oriented with the topic, I think it's relatively basic for me but still I found some new information out of it here and there. For beginners, I think this is a good book to start with. It's quite short book (cannot tell the number of pages as I read it online in a few hours) but my perception is that anyone with sufficient of understanding of how Web and the Internet works, it will be a quick read along with testing the sample codes. A good thing is that at the end of chapters there are also certain self-test questions, a cool thing!

General pros+ This book is a quite good reference to learn WebRTC, quite basic but it contains a lot of information on how to get it running using several examples.+ Self tests to check what you have learned.+ Quick explanation.+ Lot of examples.+ To be read in 1 week (1 hour daily). General cons- Not related to the book as this is a basic book, we were trying to reach some scalable broadcasting solution over WebRTC, and there is no solution covered by WebRTC yet. A really good book.

great job. Sometimes code quirks especially at dataChannel section. But the code example is well organized and well explained. Thanks

A good book to start.
