Customer Reviews

The positive things first: overall it was not a bad book. Professionally written and full of information. Probably the best book about ebay that i have read so far. What i didn't like was that the links in the book didn't work. I really wanted to read up on how to remove the background of pictures. None of the links in the book worked. Instead you can read about the expensive services waterhouse research sells on their website. To me it's always a turn off when an author tries to sell me his affiliate products or other services, even if it is done with sneaky little links in the book that promise more information but don't end up working. Call me old fashioned, but i like to read books based on the value of information the book provides not to get lured into something else. But like i said before, i did consider the information that i found in this book valuable and helpful. So just the links that didn't work. Number two, and this bothers me on a very personal level because I view myself as a pretty well educated person with many interests. But as i am typing this i just realized that maybe Neil simply didn't express himself very accurately here but probably meant the right thing. When i read that the internet gives us access to nearly 7 billion internet users my jaw literally dropped to the ground. At the time this book was published the world population was approximately 7.1 billion and i can guarantee you that not all of them are internet users. Then he writes that internet users grow by the minute which is true when you consider that the world population continues to grow. So i am giving him the benefit of the doubt here that he probably meant to say the right thing but somehow wasn't very clear about it.
