Customer Reviews

Sau Sheong Chang's book is nicely written and rich with code examples. He meets his goals of showing how to do web programming using only the Go language and "nothing more than standard libraries." However, you definitely should have some Go programming experience, some familiarity with Go syntax, and some experience with web development before diving into this text. Things are NOT spelled out with numbered how-to steps. If you are just getting started with Go, try "Go in Action" or another introductory Go programming book before tackling this work. The same applies if you have little or no web development experience. Get some first. Unlike some Manning books, you start coding in Chapter 1 in "Go Web Programming," and you are thrown into the deep end of the swimming pool in Chapter 2. The author wisely cautions: "If you find this chapter a bit too intimidating--especially with the rush of Go code--don't be too alarmed. Work through the next few chapters and then revisit this one and you'll find that things become a lot clearer!" In Chapter 2, you build a simple Internet forum app called ChitChat, and data is stored in a PostgreSQL relational database. The remaining eight chapters dig deeper into the web development process using Go, including testing and deploying to standalone servers, to services such as Heroku and Google App Engine, and to Docker containers. A lot of work clearly has gone into preparing this book. But again, be sure you have some Go experience and some web development experience before tackling "Go Web Programming." (My thanks to Manning for making a review copy available.)
